

BEACHHEAD & BETA **PLAYBOOK**

Where Haulin' Hooves launches first, and how we gather a beta list of real haulers before the app goes live.

CIRCUITS

BETA LIST

NEXT STEPS

SAMPLE-DATA PROTOTYPE

PICK A BEACHHEAD CIRCUIT

Start where hauling is densest and where Kimberly knows the ground: **Texas** or the **Prairie / NBHA barrel districts** are the strongest first markets. A perfect map of one circuit beats a thin map of the whole country — we nail one, then expand.

CIRCUIT	FOOTPRINT	BEACHHEAD FIT
Texas	TX	TOP PICK Densest hauling, huge event calendar, single-state simplicity
Prairie	KS, OK, NE, MO	TOP PICK Barrel-racing heartland, heavy cross-state hauling
Turquoise	AZ, NM	STRONG Big winter season, snowbird haulers
Mountain States	CO, WY	STRONG Real clearance and grade hazards show off the fit engine
Badlands	ND, SD, MN	Dense summer season
Southeastern	FL, GA, AL, SC, TN	Year-round; good winter start
California	CA, NV, HI	Large but geographically sprawling
Columbia River	WA, OR, ID	Pacific Northwest
Great Lakes	MI, OH, IN, IL, WI	Midwest
First Frontier	NY, PA, NJ, New England	Shortest hauls; weakest fit
Montana	MT	Single-state, smaller market
Wilderness	UT, ID, NV	Interior West

BARREL-RACING BODIES

- **NBHA** — organized into state districts with huge membership; pick one district for an instant community to recruit from and a tight area to map. Often the better beachhead: this is the core hauler.
- **WPRA** and **Better Barrel Races (BBR)** — national, event-based.

OTHER WESTERN DISCIPLINES

- **NCHA / NRCHA** — cutting & cow horse, Texas-heavy
- **NRHA** — reining · **USTRC** — team roping
- **AQHA** shows · **NHSRA** high-school rodeo (young, social-media-active families)

HOW TO BUILD THE BETA LIST BEFORE LAUNCH

02

The landing page is already the capture engine — the job is getting the right haulers to it, all inside the chosen beachhead so the first users match the first data. Aim for **100–300 engaged signups** in the region before launching the real app.

One setup step first: turn on the Google Sheet webhook (see SETUP.md in the repo) so every signup is captured before you drive any traffic — otherwise early leads only live in each visitor's browser.

1

START WITH THE WARM NETWORK — THIS WEEK

Kimberly's barn, riding buddies, local club and association contacts. A personal "I'm building this — try it and tell me what's missing" gets 20–50 quality signups and honest feedback fast, and matters more than any ad.

2

GO WHERE HORSE HAULERS LIVE ONLINE

- **Facebook groups** are the channel for this demographic — barrel racing, rodeo, "[State] Horse Owners," trail riding, breed groups. Get the admin's blessing, then post value (a short demo clip), not spam.
- **Instagram / TikTok** — western and rodeo hashtags; a 20-second "watch it check if this arena fits my rig" clip. This audience shares.

3

BOOTS ON THE GROUND IN THE REGION

- **Feed stores & tack shops** — a flyer with a QR code to the landing page; they are community hubs.
- **Events** — a barrel race, county rodeo or horse expo with a QR sign-up sign; one weekend can net a few hundred.
- **Association secretaries** (NBHA district, saddle clubs, 4-H, high-school rodeo) — offer members a free tool and ask them to share.

4

GIVE A REASON TO SIGN UP NOW

"Founding Hauler" early access, a free season pass for the first 100, or a giveaway (feed gift card or tack) for signup plus a share. Add a simple referral ask to the success message.

5

RUN CHEAP TARGETED ADS

Facebook and Instagram can target horse owners plus trailer interests by geography. In one region, \$5–\$10/day goes a long way and tells you your real cost per lead.

NEXT STEPS ONCE KIMBERLY PICKS A CIRCUIT

Name the circuit or NBHA district and the data build starts on that region:

1 SEED THE MAP

Pull every horse-relevant business in the region — arenas, vets, feed stores, fuel, dump stations — from OpenStreetMap (open-licensed, storable) into a Supabase table. This is the first real data spine, done in about a day.

2 ENRICH IT LIVE

Google Places adds fresh hours, ratings and photos on top; state DOT open data adds real low-clearance and bridge hazards for the fit engine.

3 VERIFY THE RIG LAYER

Clearances, pull-through access and hookups — the details nobody else has — get confirmed by Kimberly and the community. This is the moat.

4 RECRUIT IN PARALLEL

Run the beta playbook in the same region, so the first users match the first data on day one.

Meanwhile: flip on the submission webhook, and have counsel review the Terms / Privacy templates before any public launch. Everything in the prototype is sample data for demonstration only.

Let's ride. HAULIN' HOOVES · ONE APP, WHOLE SEASON
